PPG INDUSTRIAL TALK

Summary

On 5th November, an industrial talk was held in the HyFlex classroom featuring PPG. The session introduced the company as a global leader in paints and coatings, covering its history, main departments and SAP implementation journey. Speakers explained how SAP supports PPG's operations in areas like supply chain, finance and inventory management. They also highlighted the benefits of pursuing an SAP career, including strong industry demand and certification opportunities. The talk concluded with an overview of PPG's workflow, by showing how SAP integrates business processes for greater efficiency.

The main technology highlighted throughout the session was SAP (Systems, Applications, and Products in Data Processing), an enterprise resource planning (ERP) system used to manage various business processes. The speaker explained that SAP supports four major business flows in PPG:

- Procure to Pay
- Demand to Replenish
- Order to Cash
- Record to Report

These flows enable PPG to manage procurement, production, sales, and financial reporting in an efficient and standardized manner.

PPG also shared its progress in adopting SAP over the years. In 2007, PPG upgraded its system from SAP R/3 to SAP ECC 6.0 (Unicode). In 2018, the company implemented SAP S/4HANA in the Australia and New Zealand region. By 2025, PPG plans to move to SAP S/4HANA for EMEA + APAC and migrate its system to AWS cloud, supporting better performance and scalability. The speaker highlighted that SAP professionals are in demand globally, offering strong career stability and opportunities for continuous learning.

Sabrina Heng Wei Qi A23CS0265

From this talk, I gained a clearer understanding of how SAP supports real business operations, especially in a global company like PPG. I learned how different processes in a business are connected and managed through SAP, making operations more efficient and organized. The talk also made me realize that SAP skills are highly valued in the industry and can open many career opportunities worldwide. This session motivated me to explore SAP further and improve myself to stay relevant in the future job market.

My second visit to the PPG industrial talk helped me gain a greater knowledge of the business and how it operates. I learned more about PPG's history, and how it has effectively used SAP to boost productivity and data management. I also discovered how beneficial it is to pursue a career in SAP due to its high industry demand and growth prospects. Overall, this workshop increased my interest in enterprise solutions and deepened my understanding of how PPG incorporates technology into its business processes.
