

ATOMY LIQUID LAUNDRY DETERGENT

The Chemistry of a Gentle, Deep Clean

Key Ingredients & Formulation

Formulation Type:
Concentrated Neutral Liquid

 Advanced Alcohol-Based Surfactants (Non-Ionic): Primary cleaning agent stain removal

 **Alkyl Polyglucoside:** Gentle, derived non-ionic surfactant

 **Alkyl Polyglucoside:** Gentle, plant-based (Saponin) non-ionic surfactant

 **Baking Soda:** Low-alkali builder & stain neutralizer

 **Pine Needle Extract:** Phytoncide effects

Function:
Highly concentrated deep-cleaning, gentle on skin and fabric

The Chemistry of Cleaning

Mechanism:
The "Rolling-Up" Micelle Action

1 Wetting & Penetration
The detergent's surfactants lower water's surface tension, allowing the wash liquid to quickly penetrate the fabric fibers and reach the embedded dirt/oil

2 Micelle Formation
The hydrophobic tails of the detergent molecules attach to the dirt

3 Suspension & Rinsing
The micelles (now carrying the dirt) remain suspended in the water due to their water-loving outer heads

Result:
A deep clean with fiber protection

Analysis & Safety

Formulation & Claims Analysis

 pH Level: Neutral

Key Differentiators:

✓ 3 Plant-Derived Surfactants (Quillaja, Soapberry, Soapwort) for natural foaming/cleaning

✓ Pine Needle Extract: Included for a phytoncide effect (protection from microorganisms)

Dermatological Safety

Claim:
Highest grade certification for skin non-irritation

Conclusion:
PROS - Concentrated, effective
CONS - Premium price
